

SHEERSH ATRISHI

Full Stack Developer | AI Strategist | Founding Engineer
+91 8958397705 | SheershAtrishi@gmail.com | [LinkedIn](#) | [GitHub](#) | Noida

PROFESSIONAL SUMMARY

4+ years Software Engineer and Full Stack Developer skilled in **Python, LLMs**, Java, **React, Gen AI**, Spring Boot, microservices, and **React/Angular**. Aspiring **CCA (Claude Code Architect)**, builds secure, high-performance APIs and event-driven systems on **AWS/GCP** with Docker, Kubernetes, and Kafka. Strong DSA and system design; improves latency, reliability, and CI/CD for scalable products.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript, **TypeScript, Python**, C++, Golang, Rust, Kotlin, C#,
Frameworks: Spring, Spring Boot, Hibernate, **Node JS**, Nest JS, **Colyseus**, Ruby on Rails, .Net,
FastAPI Frontend: React, Angular, HTML5, CSS, Next JS, **React JS, React Native**
Backend: REST, GraphQL, gRPC, Redis, NGINX, Web Authentication, **Web Sockets, Supabase**
Tools: Docker, Jenkins, GitLab CI/CD, Artifact Management, Terraform, ELK Stack, Grafana, Prometheus, Apache Kafka, RabbitMQ, Flyway, Liquibase, Vite
Databases: PostgreSQL, Oracle, MongoDB, MySQL
Platforms: AWS, GCP, Azure, AKS, Kubernetes, **LLMs**
Methodologies: Agile, Scrum, CI/CD, Microservices, Event-Driven Architecture, API-First, **RAG**
Development Library: Redux, JPA, Tailwind CSS, **Cursor, Codex, Claude, Codium, Lovable, Bolt**
Others: Cloud Networking, Auto-Scaling, Asynchronous Messaging, Message Queuing, High-Throughput Messaging, Load Balancing, Autoscaling Policies, Alerting & Incident Response, TLS 1.3, AES-256, PCI DSS, SOX, OWASP, Security Hardening & Penetration Resilience, Atomic Design, UI Performance, **HIPAA** Optimization, Secure DevOps Practices, AI Automators, Caching Layers, **Gen AI**

PROFESSIONAL EXPERIENCE (4+ YEARS)

Founding Engineer | [Audena.io](#) | **{{ Remote }}** | **March 2026 - Present**

- Leveraged AI-assisted engineering workflows using **Claude code, Codex, Cursor, Qwen AI**, etc. for architecture planning, debugging, large-scale refactoring, and accelerated feature delivery across backend and frontend systems.
- Built a scalable multi-tenant **RAG infrastructure** using **vector databases** and **embedding pipelines** to ingest CRM records, documents, FAQs, and product catalogs, allowing AI voice agents to answer customer queries with real-time contextual grounding.
- Built and shipped the complete Audena AI voice-CRM platform **single-handedly** as the founding engineer, covering the backend, frontend, and real-time voice infrastructure using **FastAPI, Postgres, Redis, AWS, Terraform, Hyros**, and **React/TypeScript**.
- Developed the **real-time AI voice** runtime that connects telephony providers with **LLMs** in under **800 ms**, enabling seamless live conversations between users and AI agents.
- Designed and implemented a **multi-LLM orchestration** layer with failover support across **Gemini Live, OpenAI Realtime**, and Qwen, including real-time audio transcoding, barge-in handling, and mid-call state recovery without dropping active conversations.
- Integrated multiple telephony and CRM ecosystems single-handedly, including **Twilio, Plivo, Vonage, Shopify, Klaviyo, and HubSpot**, along with a **Stripe- and Razorpay**-powered wallet and billing system.

Technologies Used: Python 3.12, TypeScript, C, SQL · FastAPI, Redis 7, PgBouncer · Twilio, Plivo, Vonage, WebSockets, PCM16 audio transcoding · Gemini Live, OpenAI Realtime, Qwen, OpenAI Whisper, LangGraph, Shopify, Klaviyo, HubSpot, Stripe, Razorpay, AWS, Caddy, Cloudflare Tunnel · Prometheus, PyTest.

Full Stack Developer | [Via.Com](#) | **Noida** | **Apr 2022 - February 2026**

- Designed and deployed scalable **Retrieval-Augmented Generation (RAG)** pipelines using Python, Kafka, vector embeddings, and semantic search to process and retrieve enterprise knowledge at scale, reducing response latency by 40% while improving answer accuracy, contextual relevance, and AI agent reliability.

- Lead responsive **React/TypeScript** interfaces with integrated **GenAI**-assisted components, streamlining booking workflows and improving user efficiency by over **25%** through smarter automation and intuitive UX.
- Integrated **LLMs**, diverse travel, payment, and data APIs using Python to enhance platform interoperability and real-time accuracy, incorporating **GenAI-powered** validation pipelines to improve reliability and reduce manual verification overhead.
- **Developed and optimized scalable Python-based RESTful APIs (FastAPI/Flask)** to operationalize machine learning and GenAI workflows, improving system response latency by **30%** and enabling automated, intelligent decision-making across the platform.
- Tuned **Oracle SQL and PL/SQL** for faster queries, improving data retrieval by 35%, especially for **HIPAA-Compliant**.
- Designed event-driven Python data pipelines using Kafka to ingest and process high-volume datasets, reducing end-to-end data latency by 40% and enabling faster ML feature availability.
- Enforced **data security** using AES-256 and TLS 1.3, meeting **PCI DSS** standards for sensitive customer information.
- **Increased automated test coverage to 95%** by implementing robust testing frameworks (PyTest, unittest, requests), reducing production defects and leveraging **GenAI-driven test generation** to rapidly create edge-case scenarios and accelerate model/API validation.

Technologies Used: Python, FastAPI, Flask, React, TypeScript, Oracle, PL/SQL, Apache Kafka, PySpark, QlikView, GCP, Kubernetes, Jenkins, GitLab, AES-256, TLS 1.3, PyTest, unittest, requests, LLM tooling

Full Stack Developer Intern | [Cavebeat.Com](#) | {{ Remote }} | [Mar 2021 - Apr 2022](#)

- Designed **microservice-based backends** to **increase throughput** and decouple services across the platform.
- Built reusable **UI components** and dynamic interfaces, elevating engagement by 40% across core modules.
- Optimized **API data flow** and endpoint design for 25% faster responses and reduced network overhead.
- Automated build, test, and release pipelines with **CI/CD**, cutting release cycles by 50% and improving delivery reliability.
- Containerized services and standardized environments with **Docker**, eliminating configuration drift and accelerating onboarding.
- Applied centralized logging and observability with **ELK/Grafana**, expediting root-cause analysis and improving incident response time.
- Increased system resilience via **caching, API rate limiting**, and fault-tolerant handlers across critical paths.
- {{ Expanded automated test suite to achieve **92%** test coverage, cutting production defects by 60% and accelerating release readiness across modules. }}
- {{ Enforced proactive rollback and systemized healing across services, reducing mean time to recovery by **75%** and lowering post deploy incidents. }}

Technologies Used: Microservices, CI/CD, Docker, ELK Stack, Grafana, Caching Layers, API Rate Limiting

PROJECTS

[Inventra ERP System](#) | {{ Cavebeat.com }}

<https://github.com/sheersh03/InventraERP>

Production-ready ERP SaaS starter using Next.js, TypeScript, Tailwind, and Prisma with multi-tenant schema design and role-aware Node APIs.

- Implemented **Stripe billing** with **secure webhooks** and **role-aware controls**, reducing manual operations by {{ 46% }}.
- Delivered **audit trails and approval workflows**, accelerating enterprise feature delivery by {{ 15 days }}.

[NovaSearch Search Engine](#) | {{ Cavebeat.com }}

<https://github.com/sheersh03/CaveBeat-Search-Engine>

Next-gen search prototype with React, Vite, TailwindCSS, Framer Motion, and React Router focused on cinematic UX and fluid interactions.

- Built **smart filters and quick actions** that reshape results in real time, improving task completion speed by **{{ 50% }}**.
- Created **theme-aware UI** and modal workflows, increasing perceived responsiveness by **{{ 79 ms }}**.

The Ultimate Job Automator | **{{ Personal Project }}**

<https://github.com/sheersh03/Job-automator>

FastAPI backend with Postgres logging and a Next.js dashboard for scheduler status, logs, and analytics; packaged via Docker Compose.

- Mechanized **application pipeline**, cutting manual effort by **{{ 30 hours per week }}** and improving consistency by **{{ 28% }}**.
- Orchestrated **Docker Compose** for backend, frontend, and database, reducing setup time by **{{ 60% }}**.

The Express API Integrator | **{{ Via.com }}**

<https://github.com/sheersh03/XpressCodeGen>

Spring Boot backend and minimal UI integrated with Ollama for on-device LLM responses to generate structured supplier outputs.

- Delivered **LLM-powered prompt processing**, accelerating API integration pipelining by **{{ 70% }}**. • Established workflow toward **computerized code generation**, reducing developer effort by **{{ 38 hours/week }}**.

Hotel Booking Bot | **{{ Via.com }}**

<https://github.com/sheersh03/Hotel-Booking-Bot>

Conversational hotel-search assistant using Vite, React, TypeScript, TailwindCSS, and Framer Motion with an offline-ready prototype.

- Created **animated hotel cards and explainability modules**, boosting engagement in prototypes by **{{ 56% }}**.
- Implemented **offline-ready mock data** for instant interactions, lowering perceived wait times by **{{ 60 ms }}**.

The Custom Stock checker for local stores | **{{ Cavebeat.com }}**

<https://github.com/sheersh03/Inventory-Management-Intrinsic>

React Native + TypeScript app with Redux Toolkit, Expo, SQLite, and React Navigation; packaged into a Windows executable via Electron.

- Built **offline-first inventory** with local persistence, decreasing sync errors by **{{ 80% }}**. • Optimized **Electron packaging** with Vite and tsup, reducing deployment complexity by **{{ 70% }}**.

EDUCATION

Bachelor of Technology (Science) | **{{ 08 }}** **{{ 2022 }}**

Dr. A.P.J. Abdul Kalam Technical University | *Lucknow*

HOBBIES

- DJing, Teaching, Crafting modularities and automations.
